secure

smarter energy communities

The SECURE project aims to foster energy-secure communities through the promotion of **energy efficiency** and **renewable energy solutions**

The project will transfer & implement innovative energy solutions for **housing & public infrastructures** in 7 regions across the Northern Periphery & Arctic programme area

Partners will study **effective technologies and good practice approaches** that promote the increased use of energy efficiency and renewable energy solutions

SECURE's outputs

5 Smarter Energy Communities

Five regions will establish a Smart Energy Community in a village, rural area or neighbourhood. A programme of activities will be completed in these communities to engage and empower citizens to become energy leaders. This programme will also seek to build up local authority expertise

15 energy solutions applied

The five Smarter Energy Communities will be supported by the implementation of fifteen energy solutions which retrofit twenty-four houses

Increase efficiency by 5% in at least 3 public buildings

The partners will transfer and implement measures which increase energy efficiency by 5% in at least 3 public buildings

Install alternative energy sources in 3 public infrastructures

The partners will install alternative or renewable energy solutions in public infrastructure across five regions
